

SUOMI  FINLAND

ANIMAL HEALTH CERTIFICATE
for export of porcine semen from Finland to the Kingdom of Thailand

I General information

I.1 Certificate number		I.2 Competent ministry of exporting country Ministry of Agriculture and Forestry of Finland	
I.3 Competent central authority of exporting country Finnish Food Authority		I.4 Competent local authority issuing this certificate	
I.5 Country of origin and ISO Code Finland FI		I.6 Country of destination and ISO Code Thailand TH	
I.7 Consignor/exporter Name Address Email address		I.8 Consignee/importer Name Address Email address	
I.9 Semen collection centre Name Address		I.10 Place of destination Name Address	
I.11 Means of transport and identification or document reference		I.12 Seal number(s)	
I.13 Import notification number	I.14 Species (scientific name) <i>Sus scrofa domesticus</i>	I.15 Total number of doses	

II Identification of the product(s)

#	II.1 Identification number of the donor boar	II.2 Breed	II.3 Name and address of the premises of origin of the donor boar
1			
#	II.4 Date of collection	II.5 Number of tubes	II.6 Identification marking on straws/ampoules
1			

III Attestation

I, the undersigned Official Veterinarian, do hereby certify that:

1. Finland is recognized as self-declaration of historical freedom from African swine fever (ASF) by the World Organisation for Animal Health (WOAH);
2. Finland or a region or zone in Finland is recognized as officially free from foot and mouth disease and classical swine fever (hog cholera) by WOA, has a self-declared free status of swine vesicular disease according to the WOA, and is recognized as free from Aujeszky's disease in kept porcine animals in accordance with Regulation (EU) 2021/620, and the donor animals originated and were kept in the officially free region/zone;
3. Finland has a disease free status of *Mycobacterium tuberculosis* complex in accordance with Regulation (EU) 2021/620;
4. the semen described above was collected from porcine animals held at the semen collection centre which is approved by the competent veterinary authorities of Finland and is under official veterinary supervision. The procedures for approval, the health and the hygiene control at the semen collection centre are conducted in accordance with Regulation (EU) 2020/686;
5. boar or teaser animals are only inserted at the semen collection centre if they are found to be clinically healthy. There have been no clinical cases or other evidence in the animals of the following diseases for the past 12 (twelve) months prior to collection and the dispatch of semen to Thailand:
 - a) brucellosis
 - b) leptospirosis
 - c) vesicular stomatitis
 - d) swine influenza
 - e) porcine parvovirus infection
 - f) porcine respiratory and reproductive syndrome (PRRS)
 - g) atrophic rhinitis
 - h) transmissible gastroenteritis;
6. the semen was collected from donor animals which were found to be clinically healthy and free from clinical signs of disease on the day of collection;
7. all porcine animals admitted to the semen collection centre have been tested for brucellosis (*B. abortus* and *B. suis*) with a negative result within 30 (thirty) days prior to the start of the quarantine period at the quarantine facility;
8. the donor animals and any teaser animals used in the collection of the semen have been tested for PRRS with a negative result within 30 (thirty) days prior to the start of the quarantine period at the quarantine facility and re-tested for PRRS with a negative result at the quarantine facility within 14-21 days after the first test using methods recommended by the WOA;
9. all donor animals and teaser animals admitted to the semen collection centre are chosen from herds or holdings which are free from brucellosis in accordance with the WOA Terrestrial Animal Health Code;
10. all animals kept at the semen collection centre are subjected to routine tests for brucellosis with negative results, with the test being carried out at least every 12 (twelve) months;
11. transmissible gastroenteritis (TGE) is officially notifiable and no clinical case has been recorded in the last 3 (three) years in Finland in accordance with WOA Terrestrial Animal Health Code;
OR
the donor animals and all teaser animals used in the collection of the semen have been tested with negative results for TGE using test methods recommended by WOA:
 - for fresh semen, the donor animals were subjected to a diagnostic test for TGE with negative results during the 30 days prior to collectionOR
 - for frozen semen, the donor animals were subjected to a diagnostic test for TGE with negative results at least 14 days after collection; and
12. the semen was collected, processed and stored strictly in accordance with the relevant criteria set out in Regulation (EU) 2020/686.
