## Acknowledgements

The following experts are thanked for their effort to find the trivial plant names in their languages: Áslaug Helgadóttir (Iceland), Ilona Kryspin Sørensen (Polish) and Fany Ribarova (Bulgarian).

The experts mentioned below are thanked for their contribution to the revision of the trivial plant names in the following languages: Christer Andersson (Swedish), Peter Hollman (Dutch), Yvonne Holm (Finnish), Trine Husøy (Norwegian), Maria Kapsokefalou (Greek), Claudia Krines (German), Vanessa Neveu (French), Milagro Reig (Spanish), Eduardo Rosa (Portuguese), Emanuela Testai (Italian) and Femke Vos (French).

## Preface

### *Introduction*

EuroFIR, the European Food Information Resource Network of Excellence (<http://www.eurofir.net>) is a partnership between 48 universities, research institutes and small-to-medium sized enterprises from 25 European countries and is funded by the European Commission's Research Directorate General (DG Research) under the *Food Quality and Safety Priority* of the Sixth Framework Programme for Research and Technological Development. The project started on 1st January 2005 and will be funded until December 2009. One of its main strategic goals is to increase the availability of food composition databases via the internet in Europe, including national nutrient databases and specialised collections such as the EuroFIR BASIS database of bioactive compounds with putative health benefits.

The latter forms part of work package 2.4 (WP 2.4), which is establishing a web-based integrated database on critically assessed compositional and biological activity data for bioactive compounds in major European food plants. As part of these activities, WP 2.4 has also updated a list covering over 300 major plants and edible fungi eaten in Europe, prepared originally under the EU NETTOX project (1995-1997) (Gry *et al.* 1998). This EU NETTOX plant list includes both the scientific and trivial names for the plants in 12 European languages. The NETTOX project was funded by DG Research under the EU AIR programme.

This EuroFIR technical report provides the revised list, the *EuroFIR-NETTOX Plant List*, which is basically unchanged, except for revision of some plant names and inclusion in the list of plant (mushroom) parts eaten in Europe, and addition of trivial plant (mushroom) names in a further three European languages. Therefore, the list can continuously be used as important guidance for regulatory authorities at European and national levels, e.g. EU DG SANCO and national authorities in the Member States, in relation to novel food regulation.

### **The EuroFIR-NETTOX Plant List**

The following changes have been made to the original NETTOX plant list (Gry *et al.* 1998):

1. The scientific names for plant species, synonyms and families have been revised according to the following priorities:
  - First: Mansfeld's World Database of Agricultural and Horticultural Crops (Hanelt *et al.* 2001)
  - Second: Relevant volumes of PROSEA (Plant Resources of South-East Asia, Vol. 1, 2, 8, 9, 10, 13, 14, 16, 18)
  - Third: The Plant-Book (Mabberley 1997).
2. The author names of the plant species (which are part of the scientific name) have been updated according to Brummitt & Powell (1992).
3. The trivial plant names in English have been revised according to 1) Mabberley (1997) and 2) Hanelt *et al.* (2001) and in Danish according to Jensen *et al.* (2003). Additionally, the trivial plant names have been revised in the following ten languages: Dutch, Finnish, French, German, Greek, Italian, Norwegian, Portuguese, Spanish and Swedish. A further three languages, Bulgarian, Icelandic and Polish, which were not found previously in the NETTOX list, have been added to the EuroFIR-NETTOX Plant List. National experts have been responsible for the revision and addition of trivial plant names.

4. The scientific names for mushroom species and families have been revised according to Index Fungorum (2006).
5. The trivial names of mushroom species in English and in Danish have been revised according to the British Mycological Society (2006), Hanelt *et al.* (2001) and Petersen & Vesterholt (2003). Revision of the trivial names in a further ten languages and addition of three new languages has been done as described for the plant names.
6. In the revised list some species are subdivided:
  - *Apium graveolens* L. (no. 27) is now represented by three varieties: *Apium graveolens* var. *rapaceum* (Mill.) Gaudin, which is still referred to as no. 27; *Apium graveolens* var. *dulce* (Mill.) Pers., which is referred to as no. 27a; and *Apium graveolens* L. var. *secalinum* Alef. referred to as no. 27b.
  - *Foeniculum vulgare* Mill. (no. 134) has been divided into no. 134a *Foeniculum vulgare* Mill. ssp. *vulgare* var. *dulce* (Mill.) Batt. & Trab. and no. 134b *Foeniculum vulgare* Mill. ssp. *vulgare* var. *azoricum* (Mill.) Thell.
  - *Petroselinum crispum* Mill. (no. 205) has been divided into no. 205a *Petroselinum crispum* (Mill.) A.W. Hill convar. *crispum* and no. 205b *Petroselinum crispum* (Mill.) A.W. Hill convar. *radicosum* (Alef.) Danert.
  - *Prunus persica* (L.) Batsch (no. 230) has been divided into no. 230 *Prunus persica* (L.) Batsch var. *persica* and no. 230a *Prunus persica* (L.) Batsch var. *nucipersica* (Suckow) C.K.Schneid.
  - *Vigna unguiculata* (L.) Walp. ssp. *unguiculata* (no. 300) has been divided into three cultivar groups: no. 300 *Vigna unguiculata* (L.) Walp. ssp. *unguiculata* Unguiculata group; no. 300a *Vigna unguiculata* (L.) Walp. ssp. *unguiculata* Biflora group; and no. 300b. *Vigna unguiculata* (L.) Walp. ssp. *unguiculata* Sesquipedalis group.
7. In six cases, a new species has been added to the list to replace another species, either if it is rarely used or because a new species has been introduced when more than one species are used interchangeably:
  - The rhizome of lesser galangal no. 14 *Alpinia officinarum* Hance is rarely used in Europe as a spice, whereas *Alpinia galanga* (L.) Willd. is more commonly used. Therefore, the latter has been added to the revised list as no. 14a.
  - Seeds from no. 127 *Elettaria cardamomom* (L.) Maton are used as 'cardamom'. *Elettaria major* Sm. is also a source of the spice cardamom and has therefore been added to the list as no. 127a.
  - *Diplotaxis tenuifolia* (L.) DC. (no. 308) is a newcomer to the list since it is commonly and interchangeably used with no. 129 *Eruca sativa* Mill.
  - New on the list is Nashi pear no. 236a *Pyrus pyrifolia* (Burm.) Nakai.
  - New on the list is also *Triticum aestivum* L. ssp. *spelta* (L.) Thell. (no. 309).
  - *Vaccinium corymbosum* L. has been introduced as no. 290a because the fruits can either be from this cultivated species or gathered from no. 290 *Vaccinium myrtillus* L.

8. In four cases, plants were represented at the generic level in the original EU NETTOX list (Gry *et al.* 1998) rather than at the actual species level. However, not all species within these genera are used as food plants. Therefore, the edible species of interest for Europe have now been specified as follows:
- Seven edible species, not all belonging to the genus *Bambusa* (nos. 40a-g), replace no. 40 *Bambusa* Schreb.
  - Three edible species (nos. 123a-c) replace no. 123 *Dioscorea* (yam).
  - The seed oil from cotton derives from no. 143a *Gossypium barbadense* L., no. 143b *Gossypium herbaceum* L. and no. 143c *Gossypium hirsutum* L.
  - For no. 240 *Rheum x cultorum* Thorsrud & Reisaeter, the edible plant has been specified.
9. Four species were found in duplicate in the original NETTOX list: apricot, watercress, English gooseberry and common jujube. To rectify this:
- A link has been made from *Armeniaca vulgaris* Lam. (no. 30) to the correct scientific name for apricot *Prunus armeniaca* L. (no. 221).
  - A link has been made from *Rorippia nasturtium-aquatica* (L.) Hayek (no. 245) to the correct scientific name for watercress, *Nasturtium officinale* R.Br. (no. 191).
  - A link has been made from *Ribes grossularia* L. (no. 241) to the correct scientific name for English gooseberry, *Ribes uva-crispa* L. (no. 244).
  - A link has been made from *Ziziphus zizyphus* (L.) Meikle (no. 307) to the correct scientific name for common jujube, *Ziziphus jujuba* Mill. (no. 306).
10. Plants used as natural sources for flavourings were identified and marked with an asterisk (\*) in the NETTOX list in a column with the heading 'class' and this classification has been retained in the revised list.
11. The list from 1997 (Gry *et al.* 1998) did not include information indicating which parts of the plant (or mushroom) are used. However, such information has been much sought after by users of the NETTOX list in relation to novel food regulation. Therefore, this information has been introduced for plants and edible fungi in the revised EuroFIR-NETTOX Plant List.
- The plant parts have been identified according to Hickey & King (2000), Harris & Harris (1994) and Spjut (1994).
  - A column for explanatory notes on plant parts has been added. In this column, three different styles of brackets are used to distinguish between different types of information:
    - ( ) refers to stage or subpart
    - [] refers to the origin of the plant part
    - {} signifies details.
  - Information in the bracket can inform the reader that, e.g. the edible part of no. 1 okra (*Abelmoschus esculentus* (L.) Moench) is the fruit, which botanically is described as an immature capsule; that the edible part of no. 15 almond (*Amygdalus communis* L.) is the seed, which originates from a drupe; and that the edible part of no. 51 rape (*Brassica napus* L. ssp. *napus*) is the seed oil and furthermore that the seed is derived from a capsule.
  - The parts of mushrooms included are in all cases the fruiting bodies.

12. A column is added for remarks, for example:

- If the plant is rarely used: e.g. no. 106 *Cornus mas* L. or no. 42 *Berberis vulgaris* L.
- For four plants it is indicated that the “use of the plant may give rise to health concern” i.e. *Aframomum melegueta* K.Schum. (no. 4), *Borago officinalis* L. (no. 48), *Lathyrus sativus* L. (no. 161) and *Physalis alkengi* L. (no. 210) (Igwe *et al.* 1999, Kamtchouing *et al.* 2002, Lüthy *et al.* 1984, Spencer *et al.* 1986, Getahun *et al.* 2005, Frohne & Pfänder 1997).
